

ADDENDA.

The following genus was accidentally omitted.

Sub-fam. MESOSINÆ.

GRAMMÆCHUS.

Grammæchus, J. Thomson, Syst. Ceramb. p. 59.

Caput antice quadratum; tuberibus antenniferis brevibus, remotis. *Oculi* mediocres, modice emarginati. *Antennæ* ♂ corpore paulo longiores, ♀ vix corporis dimidio longiores; *scapo* elongato, cylindrico; articulo tertio vix scapo longiore; sequentibus gradatim brevioribus, ultimo apice curvato. *Prothorax* ampliatus, lateribus rotundatus et inermis. *Elytra* trigonata. *Pedes* robusti, antici longiores; *femora* fusiformia; *tibiæ* anticæ curvatæ; *tarsi* postici breviores, antici in utroque sexu dilatati. *Prosternum* elevatum, brevissimum; *mesosternum* latum, antice productum. *Abdomen* breviusculum, trigonatum, segmento ultimo præcedente duplo longiore.

M. Thomson places this genus in his "Groupe Mesosité," directly after *Cacia*. It bears, however, a remarkable resemblance to *Arsysia*, amongst the *Tmesisterninæ*.

Grammæchus polygrammus.

J. Thomson, Syst. Ceramb. p. 60.

G. niger, albilineatus; lineis longitudinalibus, una transversa in medio elytrorum excepta.

Hab.—Sumatra; Singapore.

Black, with four very distinct pure white lines extending from the head nearly to the middle of the elytra, then a slightly irregular transverse line exactly midway between the base and apex, behind this another longitudinal line, and sometimes a second near the suture, terminating at the apex; body beneath black, shining, with a broad white stripe from the cheek to the end of the abdomen; *tibiæ* bordered externally with a white line; *antennæ* obscurely ringed with white.

Length 7 lines.

Page 235. *Amesisa consularis* (1866) is identical with *Amechana nobilis*, Thoms. Syst. Ceramb. p. 85 (1864).

Page 322. *Phelipara marmorata* (1866) is identical with *Anandra capriciosa*, Thoms. Syst. Ceramb. p. 96 (1864).

Page 325. *Apophrena montana* belongs, apparently, to the genus *Cleptomtopus*, Thoms. Syst. Ceramb. p. 95.

TR. ENT. SOC., THIRD SERIES, VOL. III. PART VII.—OCT. 1869.

The Summary, Tables, Index, &c., which follow, have been compiled by Mr. Dunning. And Mr. Wallace has kindly added a note, for the purpose of explaining to what extent the Tables can be relied on as exhibiting the number of Longicorns indigenous to each of the localities mentioned in the text.
